

Real connections. Protected at every step.

Behind every profile you see is a team and technology working around the clock to keep fakes, scammers and bad actors out, so you can focus on meeting someone worth your time.

Six layers of protection, working for you

Most of it happens before you ever notice. That is exactly the point.

**Every photo checked**

Photos are reviewed before they go live, using image-analysis technology and trained moderators, so the face you see belongs to the person you are talking to.

**New members screened**

New profiles are reviewed before they can reach you. If something does not add up, it gets stopped at the door, not in your inbox.

**ID verification**

When we need more certainty about who someone is, we ask them to verify their identity. Genuine members pass quickly. Fakes do not.

**First messages protected**

Scammers want to rush you off-site. Introductions that push you to other apps or ask for your number are stopped, and the sender is removed.

**Reports read by people**

Tap Report on any profile or message. A real person reviews the full picture and takes action, and your report stays confidential.

**Zero tolerance**

Requests for money, investment pitches, fake verification links, harassment and explicit content have no place here. Offenders are removed.

Scammers change tactics. So do we.

We update our checks constantly as new tricks appear. You will notice we do not publish every method we use. That is deliberate: the less the bad actors know, the harder it is for them to get through.

YOUR PART

Five golden rules for dating with confidence

01

Never send money

Not cash, gift cards, crypto or "fees", however good the story sounds.

02

Keep chatting here

Stay on Dating Frame until you know someone. Our protection stops at other apps.

03

Video call first

Real matches are happy to say hello on camera. Endless excuses are a red flag.

04

Meet in public

Choose a busy place, arrange your own travel and tell a friend your plans.

05

Report anything odd

Trust your gut. One tap alerts our team, and it could protect someone else too.
